ACTIAN™

Actian and Looker

Real-time analytics

Looker and Actian databases and management services are pre-integrated making it easy to use ad-hoc data analytics at scale without compromise.

Looker runs in the browser, so no software to download is needed.

Looker provides visualization for data managed by Actian Avalanche, Actian Vector and Actian X running on-premises or in the cloud, on AWS and on Microsoft Azure.
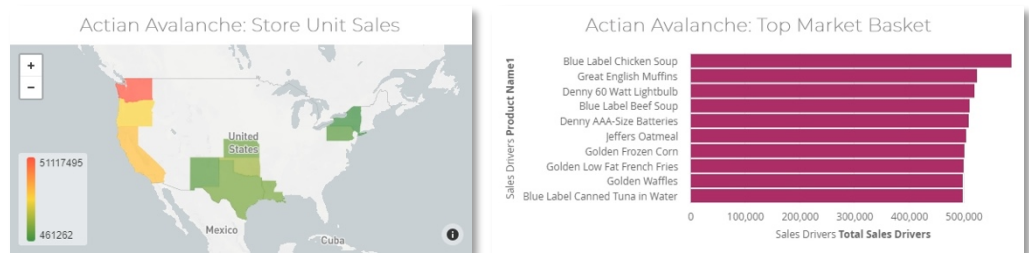

Looker uses Actian's standards-based SQL with full ACID compliance

"Actian integrates seamlessly with Looker and, even more pleasingly, delivers the same speed and performance we've become used to. Combined with Looker's powerful user interface this means that we're able to make informed pricing decisions as and when they come up, without being held back by slow servers or limited MI. As a small team with limited people resources this is a prerequisite for being successful in a dynamic marketplace like insurance, and also where we see Looker adding the greatest value."
- August Ludwigs, Pricing Analyst of The AA UK, a mutual customer

Empowering users through faster data

Actian and Looker customers enjoy secure, governed and easy visualization of real-time, operational data warehouse data to gain better insights, faster. Actian's hybrid analytic and transactional data management technology, combined with the power and ease of use of Looker delivers data as a competitive advantage to thousands of customers worldwide.

Together, Actian and Looker enable organizations to be more data-driven no matter where their data resides – on premises, in the cloud or both.

Looker brings a powerful web interface that connects to Actian directly, allowing users to discover and visualize hidden relationships in their data. LookML, Looker's modeling layer, provides governance and data access with full version control. Looker's in-database architecture with Actian products provides insights from your data at record-breaking speeds.

Looker integrates with following Actian products:

- **Actian Avalanche** provides an innovative self-tuning cloud data warehouse service, designed from the ground up for simplicity and to address all your hybrid data needs. The unique cloud-native architecture maximizes cloud resource utilization and delivers more value than alternatives.

- **Actian Vector** is a relational database engine designed for high performance analytics by exploiting performance features in today's commodity CPUs enabling in-chip analytics.

- **Actian X** hybrid database combines the industry-leading Ingres transactional and Vector analytic database engines to capture transactions and insights in one place.
